

Application Development - Pharmacy Organization

About Client

Bluenet Team provided end-to-end application development services to WorkComp Pharmacy Benefit Management (BPM) provider to design patient friendly web-portal aimed to drive a better patient experience, applying smart technology for improved decision making.

Challenges

- Start-up organization aiming to create market disruption via peer-to-peer prescription platform
- Time pressure to comply with pre-committed go-live date
- External users security compliance and security driven workflow processes for highly sensitive clinical data and claims processing
- Ability to apply machine learning (ML) to analyze prescribing patterns and to automate the routing/decision making process
- Ability for accessibility to a nationwide network of retail pharmacies

Solution

- Cloud hosted web-portal providing role based secure accessibility to patients, adjustors and management
- Instant exporting of the historical prescription orders into excel, cvs and PDF
- Real-time reporting & analytics for improved clinical oversight
- Patient-centric adjudication platform
